File Reader Design

Written by Sivasubramani T

Q: ***Designing generic File based reader which supports reading data and handles encoding, decryption & decompression based on user configuration.***

Take file properties as input

CharSet :

Charset with which the file data (binary) is encoded with. For example ISO-8859-1 is used to convert ISO Latin Alphabet string to binary for writing into file.

In case if this property is not specified then consider the bytes (Update: File is encoded with UTF-8) are encoded with UTF-8.

Encryption :

Encryption algorithm used for encrypting the data before writing to file. For example AES. If not specified, then there is no encryption and the data persisted as plain text.

Compression:

Compression logic used to compress the data before writing to file. Possible values are gzip, bzip, bz etc. In case not specified, data is uncompressed.

Design classes with respective methods to read files and perform the operation specified and return the plain text to the caller.

File Reader Design

Written by Sivasubramani T

***Steps & Design Plans*:**

1. **User Requirements**
2. **Library Requirements**
3. **Design**
4. **Code Flow**
5. **Logging**
6. **Unit Testing**
7. **Execution**
8. **Deployment**

1. Usage and User Requirements:

- File ***Encryption*** (Additional case implemented by myself)
- File ***Decryption***
- File ***Compression*** by ***GZIPZ/GZ*** format
- File ***Decompression*** by ***GZIP/GZ*** format (Additional case implemented by myself)
- File ***Compression*** by ***BZIP2/BZ*** format
- File ***Decompression*** by ***BZIP2/BZ*** format (Additional case implemented by myself)
- Parse as ***CSV record***

File Reader Design

Written by Sivasubramani T

Cryption List:

ENC_AES128

DEC_AES128

Compression List:

COM_GZIP

COM_GZ

COM_BZIP2

COM_BZ2

DCOM_GZ

DCOM_GZIP

DCOM_BZIP2

DCOM_BZ2

Above list of code only valids in this Application, will reject other codes.

2.Library Requirements:

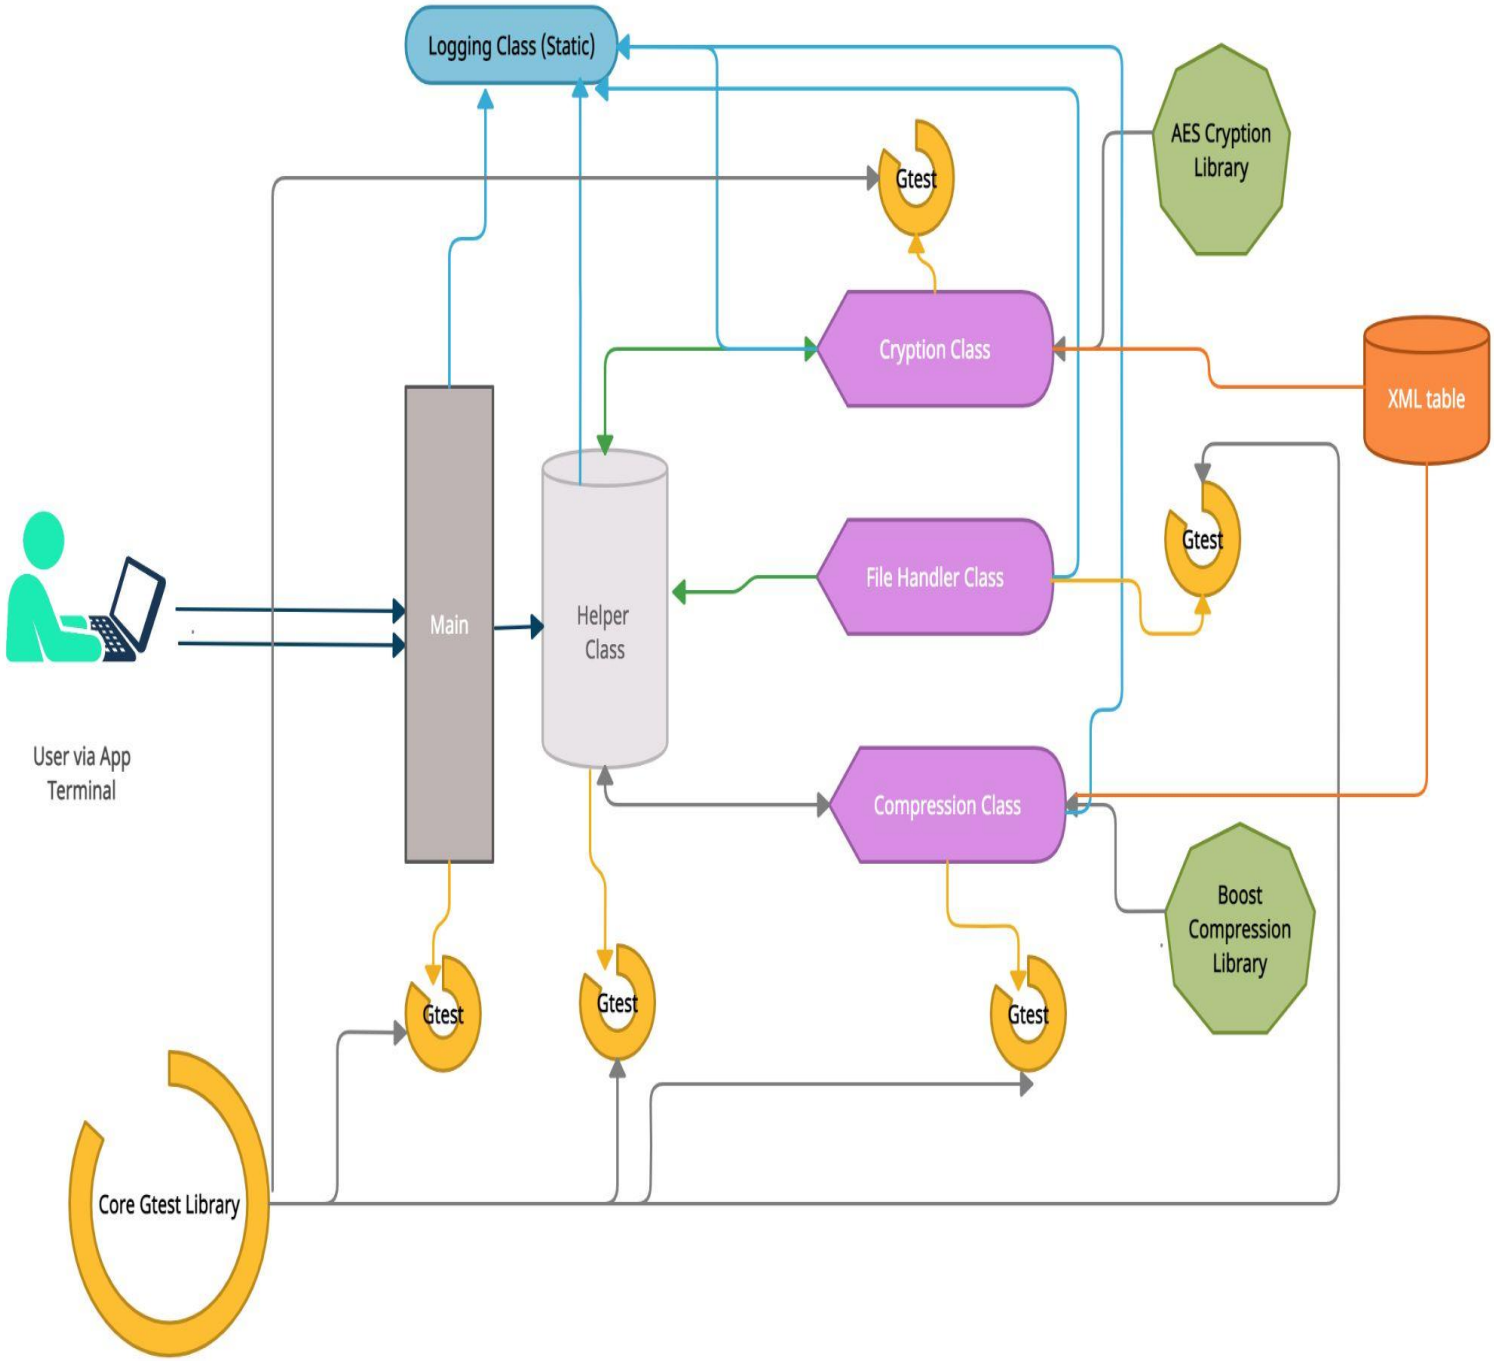
I am using C++ code for this design, For Gzip/Bzip2 Compressions using Boost Library and for AES Cryption using AES library implementation in my code. You can see below advantages for using these libraries than other libraries.

- ***Boost Iostreams Library -*** *Speed of compressing is good (inbuilt C)*
- ***AES 128 Cryption Library -*** *mandatory library for cryptio in C++*
- ***Google test Library (Unit Testing) -*** *Gtest will be good for new people to understand and easy to learn and deploy.*

File Reader Design

Written by Sivasubramani T

3. Design:



File Reader Design

Written by Sivasubramani T

XML Table used reason: Compression name and cryption name list maintained in XML which is better than list,vector,array *because compilation not need for **XML** **and we can change the xml value at run time to make program dynamic** and **we don't need to restart application to add/delete value in application***.

Main and Helper Class: Main is just an interface between command and application. Helper class helps the main function to perform action. Helper class holds all activities of command from the user and manages compression class, Cryption class and File handling class. Gtest also done for each test case.
File handler Class: It holds all activities of File copying, writing parsing and reading . Gtest also done for each test case.

Cryption Class: It holds all activities of Encryption/Decryption and is connected to logging and fetching data from xml while instance creation. Gtest also done for each test case .

Compression Class: It holds all activities of Compression/Decompression and is connected to logging and fetching data from xml while instance creation. Gtest also done for each test case.

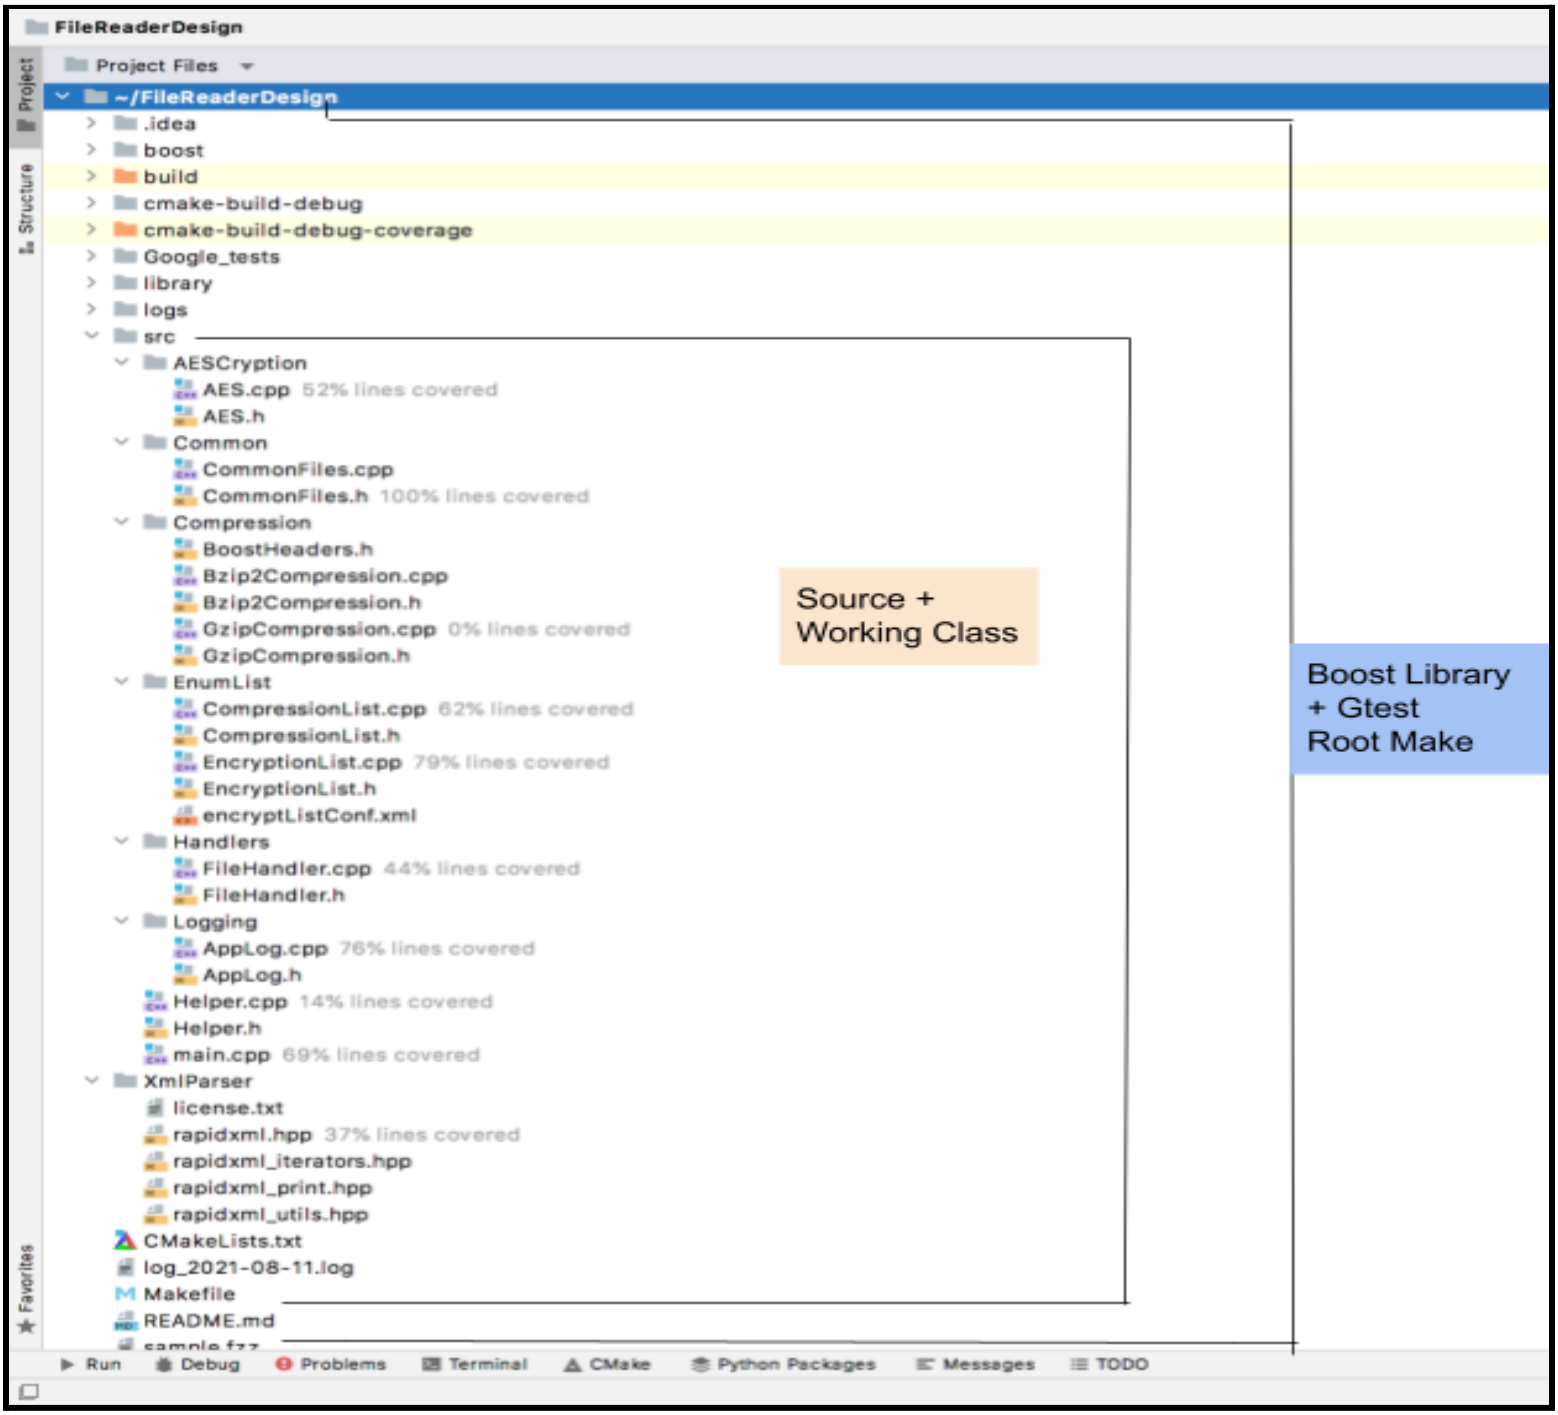
Logging: This class methods are static and invoked in all modules. Please see a separate topic below for logging.

Gtest: Gtest (unit test case) done for all modules.

File Reader Design

Written by Sivasubramani T

4. Code Flow:



File Reader Design

Written by Sivasubramani T

5.Logging:

Log is very important for any kind of system design to detect the issues, monitor etc so I deployed monitoring for this design.

Used Static member in class because log is common for all types of usage.

Implemented Log level of 5 types with time ,date and file name :

INFO,WARING,CRITICAL,ERROR,DEBUG

Example:

```
2021-08-12 12:53:06 EncryptionList.cpp:18 [INFO] ********Loading/Parsing EncryptionList from XML********
2021-08-12 12:53:06 EncryptionList.cpp:24 [CRITICAL] xmlFile not found for Cryption load
2021-08-12 12:53:06 CompressionList.cpp:9 [INFO] Load compression List
2021-08-12 12:53:06 CompressionList.cpp:17 [INFO] ********Loading/Parsing CompressList from XML********
2021-08-12 12:53:06 CompressionList.cpp:25 [CRITICAL] xmlFile not found for Compression load
2021-08-12 12:53:06 Helper.cpp:133 [INFO] DCOM_GZIP is given for out.gzip.csv
2021-08-12 12:53:06 Helper.cpp:260 [INFO] readFile process started for out.gzip.csv

2021-08-12 12:53:42 Helper.cpp:120 [INFO] Deleting all Entities
```

File Reader Design

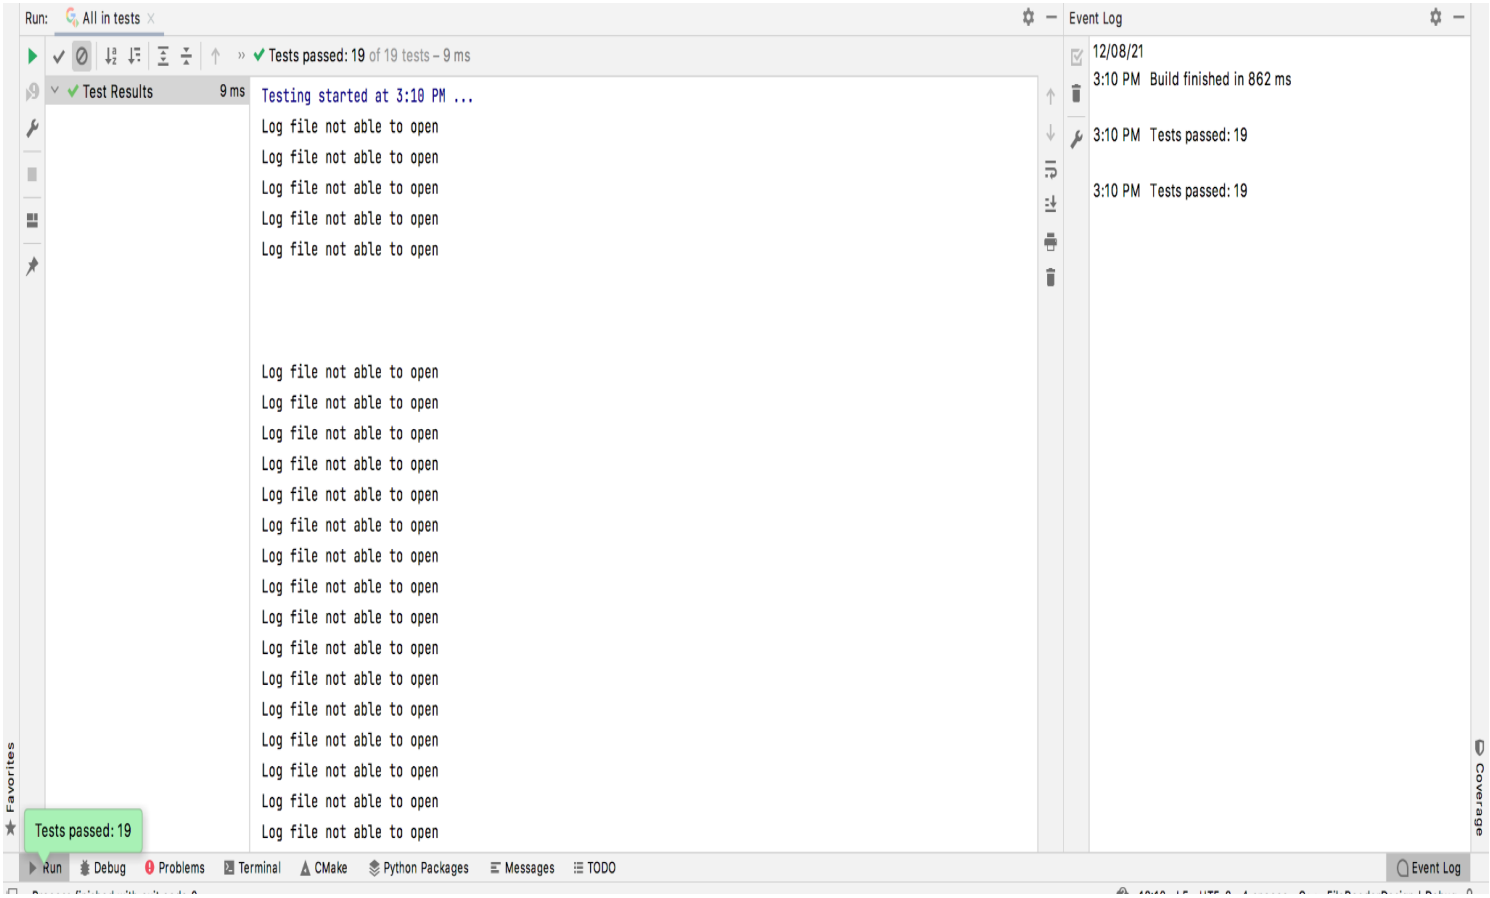
Written by Sivasubramani T

6.Unit Testing:

Unit test is another important feature to detect and debug the issue before going into production. I used Google Test which is easy to use and learn than other libraries.
Unit test is linked with root cmake by linking src directory as library.

Each module tested by Gtest:

Total Test function =***19 Passed (Out of 19)***
Total Test cases =***123 Passed (Out of 123)***



File Reader Design

Written by Sivasubramani T

7. Execution:

For this project, I used :

IDE : ***Clion (Jetbrains)***

Make file: **CMake (clion) and Make (in Mac terminal)**

Compiled Library : ***MacOS (.dylib)***

Info: *Please compile and use* ***.a for Windows*** *and* ***.so for Linux.***

Changing cmake into Make (if needed):

```
install:
all:
    echo Compiling $(CLION_EXE_DIR)/$@ ...
    g++ src/Helper.cpp src/Helper.h -o $(CLION_EXE_DIR)/FileReaderDesignMake
```

9. Deployment:

A.Clion Deployment:

Clone the repo ***https://github.com/Sivasubramani/FileReaderDesign***

Set Directory path

Run Command in Clion

B.Commands to install in mac:

Download build from below path :

https://github.com/Sivasubramani/FileReaderDesign/blob/main/build.zip

And do below:

```
unzip build.zip in
```

File Reader Design

Written by Sivasubramani T

```
cd build
make install
cd build/bin/
```

Use case 1:

```
./FileReaderDesign filename.xxx
ex: ./FileReaderDesign sample.fzz
```

Use case 2a:

```
./FileReaderDesign filename.xxx encryption_format
ex: ./FileReaderDesign sample.fzz ENC_AES128
```

Use case 3:

```
./FileReaderDesign filename.xxx compression_format
ex1: ./FileReaderDesign sample.fzz COM_GZIP
ex2: ./FileReaderDesign sample.fzz COM_BZIP2
```

Use case 4:

```
./FileReaderDesign filename.xxx compression_format encryption_format
ex1: ./FileReaderDesign sample.fzz COM_GZIP ENC_AES128
ex2: ./FileReaderDesign sample.fzz COM_BZIP2 ENC_AES128
```

Use case 5:

```
./FileReaderDesign filename.xxx decryption_format
ex: ./FileReaderDesign sample.fzz DEC_AES128
```

Use case 6:

```
./FileReaderDesign filename.xxx decompression_format
ex1: ./FileReaderDesign sample.fzz DCOM_GZIP
ex2: ./FileReaderDesign sample.fzz DCOM_BZIP2
```

File Reader Design

Written by Sivasubramani T

Use case 7:

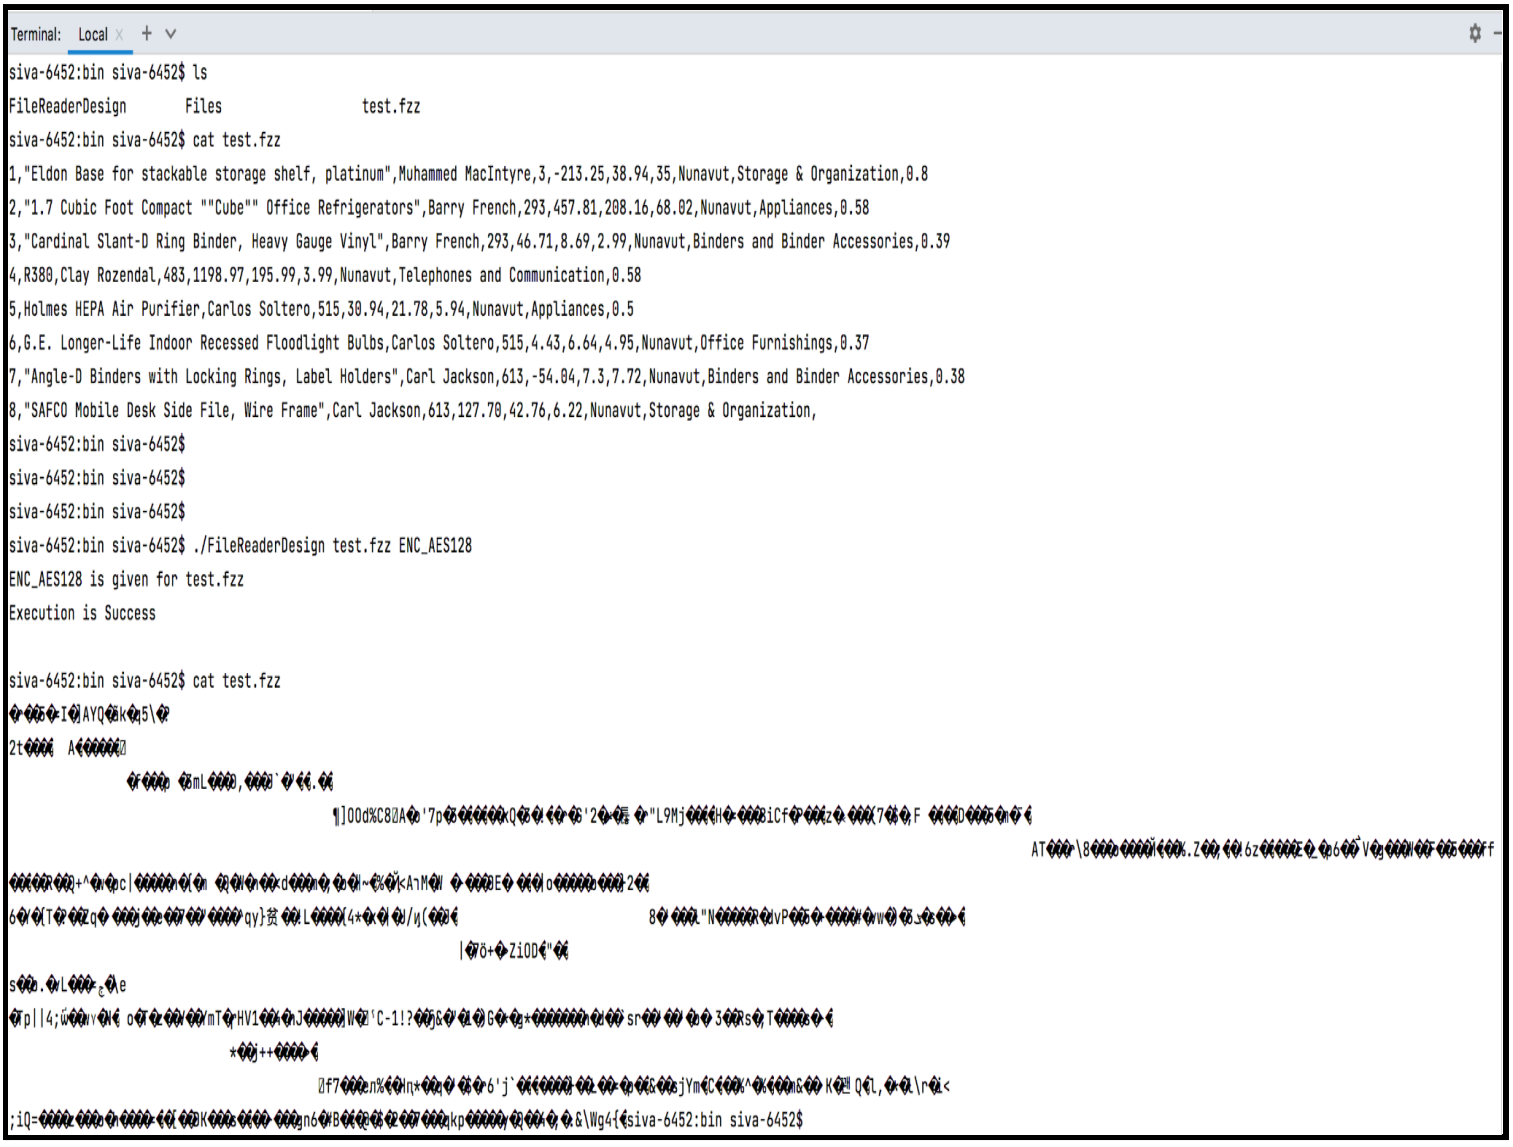
./FileReaderDesign filename.xxx decompression_format decryption_format

ex1: ./FileReaderDesign sample.fzz DCOM_GZIP DEC_AES128

ex2: ./FileReaderDesign sample.fzz DCOM_BZIP2 DEC_AES128

Samples and Working Model:

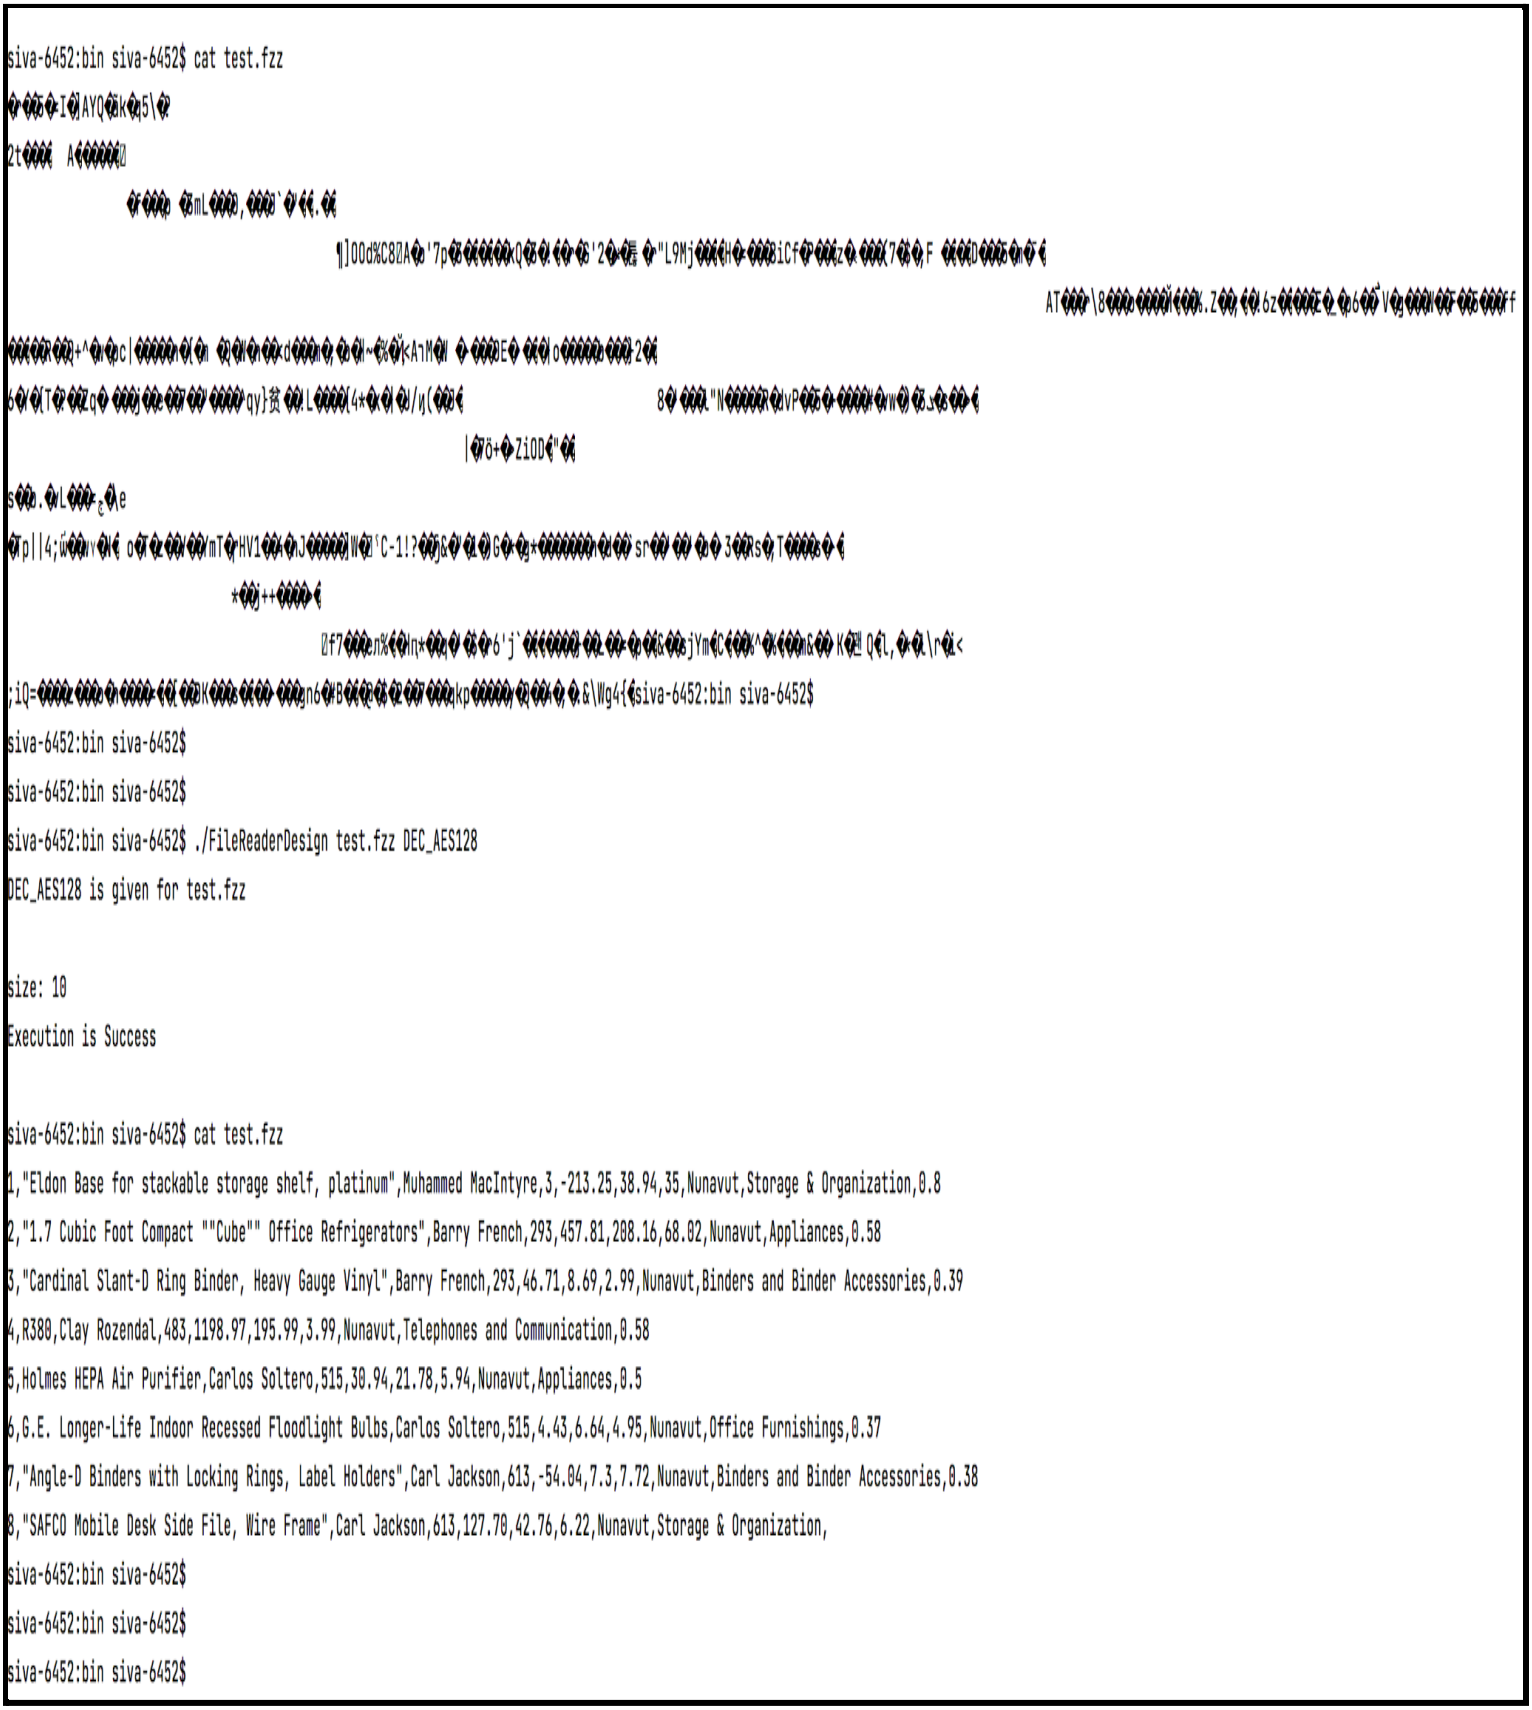
1.*ENC & DEC OF AES128:*



File Reader Design

Written by Sivasubramani T

```
siva-6452:bin siva-6452$ cat test.fzz
```



```
siva-6452:bin siva-6452$
siva-6452:bin siva-6452$
siva-6452:bin siva-6452$ ./FileReaderDesign test.fzz DEC_AES128
DEC_AES128 is given for test.fzz

size: 10
Execution is Success

siva-6452:bin siva-6452$ cat test.fzz
